

Chronic Care Management

Partner with the healthcare industry's leading source for evidence-based medicine for your Population Health & Chronic Care management needs.

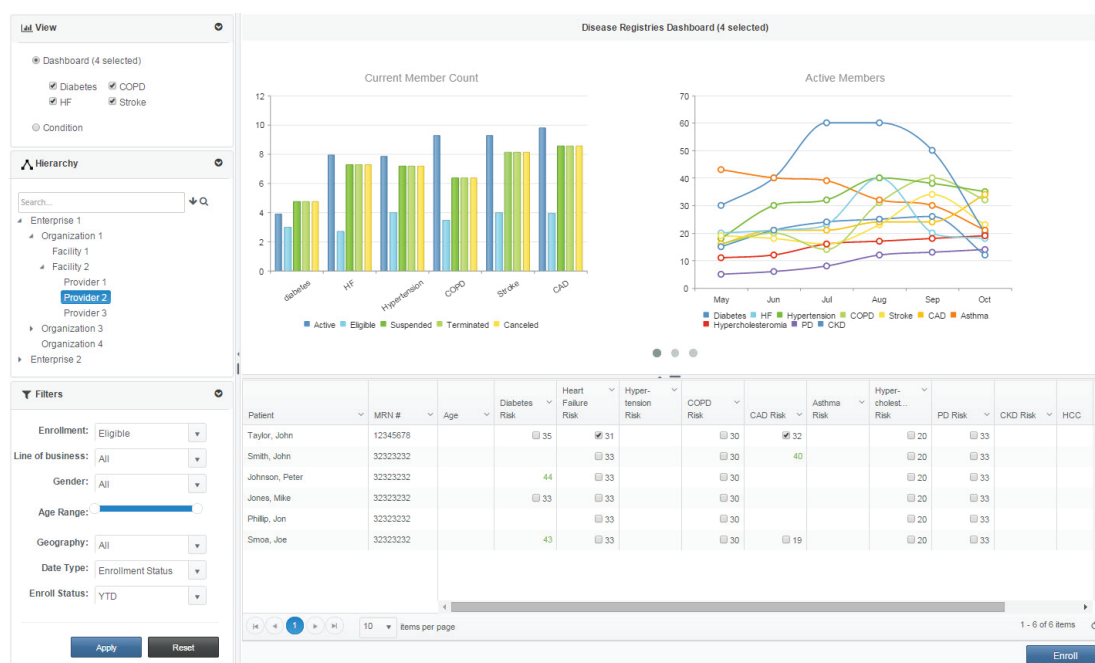

We enable practices to track, treat and bill patients to satisfy new CMS 2015 payment for monthly chronic care management.

Our Population Health Management Platform provides organizations with actionable information to improve clinical, financial and operational performance.

Under a new rule published by CMS, effective January 1, 2015, clinicians who dedicate at least 20 minutes to care management services during a 30-day period will be paid \$41.92 a month per qualifying beneficiary (those with two or more chronic conditions).

The 2015 CMS Payment Rule (CPT 99490) provides new revenue opportunities and will also help transition patients from costly in-patient care to the ambulatory setting. However, many hospitals and providers will struggle to capitalize on this new opportunity due to administrative burdens and lack of dedicated clinician resources. **We can help!**

Our comprehensive dashboard integrates seamlessly into your current clinical & financial workflows, and offers one of the largest Clinical Decision Support (CDS) medical libraries built on 30,000 evidence-based rules.

The Population Health & Chronic Care Platform Can Assist With:

- * Identifying eligible beneficiaries for enrollment from within the clinical workflow
- * Advanced analytics to manage your medicare population in easy-to-view dashboards and reports on financial and utilization performance
- * Disease registries for advanced tracking of chronic conditions
- * Real-time, evidence-based alerts to close care gaps
- * Tracking billable time, handle billing process and reimbursements for these services
- * Locating, and providing as needed, clinician resources for the required monthly care management & patient interaction
